### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with F. Brice Faller (29,532) on 12/8/04.

The application has been amended as follows:

#### **IN THE SPECIFICATION:**

On page 3, line 1 has been deleted.

The above change to the specification has been made to remove a repeated line.

### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 4,941,554 to Sollami. The improvement comprises an oscillating motor with an axial groove between the motor shaft and the sleeve, wherein the axial groove forms a pressure equalization channel connecting the ring-shaped spaces or a first axial groove in the vane connecting the ring-shaped spaces, wherein the first axial groove receives a sealing strip which seals off the working chamber for the purposes of relieving a pressure differential between the ring-shaped spaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The patent to Sollami is cited for the showing of an oscillating motor similar to applicant's but lacking an axial groove connecting the ring-shaped spaces.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of five patents.

Reichel et al. (6,181,034), Oppitz et al. (5,601,165), Devaud et al. (4,825,154), Hummel (4,716,996), and Self et al. (3,053,236) are cited to show oscillating motors.
